Fig. 77*a* shows a Yakut man and woman transporting a Yakut plow on an ox-drawn sledge. The method of plowing may be seen in Fig. 77*b*. A model of an ox sledge is illustrated in Fig. 78. Even in summer it is much easier to transport freight on sledges where there are no roads.

Transportation

Outside the City of Yakutsk, the use of the wheeled cart, adopted from the Russians, is very limited throughout the Province. Roads suitable for wheeled transport are rare. They extend only 1036 kilometers: from Yakutsk to Viliuisk (600 km.) and from Viliuisk to Suntar (436 km.). I myself had the opportunity to use a wheeled cart when traveling from Yakutsk about sixty miles to the east to the Churupcha settlement.

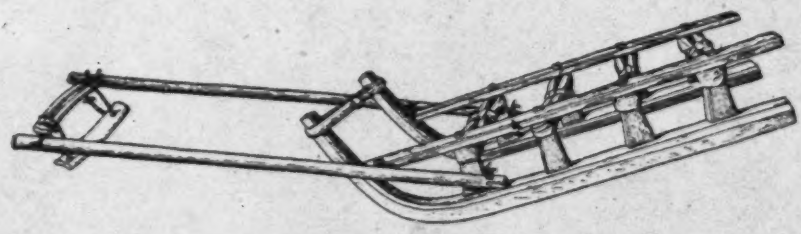

Fig. 78 (70-8832). Model of an Ox Sledge.

All the other roads are swampy and in summer were passable only on horseback; even this means of transportation is very difficult, particularly in the northern districts. In winter sledges are everywhere drawn by horses; in the northern districts reindeer and dogs are also used. Many Tungus, Lamut, and Yukaghir use the reindeer for riding, particularly in the mountainous districts between the great rivers. In summer small steamers ply the Lena and Viliui rivers. On the Yana, Indighirka, and Kolyma rivers and their tributaries large boats are used for carrying freight as well as for passengers. During the winter freight carried on pack-horses or by reindeer sledges from the shores of the Okhotsk Sea (Okhotsk, Yamsk, Ayan or Ola) over the mountains to the upper course of the Kolyma River, is floated down on pontoon-like rafts consisting of two large boats covered with a bridge. Such rafts are provided with a rudder and are propelled with long poles. As they cannot be poled up the river they are sold to the inhabitants of Nishne Kolymsk, who make boats of different sizes from them. Recently I learned that a steamer coming through Bering Strait now visits Nishne Kolymsk every summer, bringing flour and other commodities for sale or exchange for furs.

southern regions, agriculture and the processing industry in the central part, and reindeer-breeding and trapping in the northern regions.

Particular attention is given in Yakutiya to transportation. The socialist reconstruction of the new Republic began with almost a total lack of roads. The chief means of transportation was always and is still by boat. During the Five-Year Plans the transportation system has undergone a radical reorganization. Whereas in 1917 the entire Lena fleet consisted of 37 outmoded steamers and 113 barges, by the beginning of World War II the Yakut Republic had 127 steamers and more than 500 barges.

Before the Revolution steamer traffic was restricted basically to the upper and lower regions of the Lena as far as the mouth of the Vilyuy. At the present time steamers sail the whole length of the Lena, Vilyuy, Aldan, Olekma, Amga, Chara, and Maya, and all the other major northern rivers.

The development of the Yakut rivers is directly connected with a very important measure adopted by the Soviet government, namely, the opening up of the Northern Seaway, which through the heroic efforts of polar explorers, sailors and fliers has been turned into a permanently operating route. In the 1920's the Vladivostok-Kolyma routes were reopened. In 1932 the icebreaker Sibiryakov made a historic journey by sailing directly and without a stop from Archangel to Vladivostok. The heroic trip made by the Chelyuskin (1933) proved the navigability of the Northern Seaway for conventional-type steamships. In 1936 there was opened a route along the river Yana, in 1937 the Anabar, and in 1938 the Olekma and the Indigirka. The opening up of the Northern Seaway sharply stepped up the carriage of freight to the northern regions of Yakutiya.

The opening up of navigation in northern Yakutiya helped the economic resuscitation of this region. From that time on, the mining and fishing industries began to develop and strengthen. Commodity turnover increased sharply as a result. Coal, timber, salt and food products were delivered to the lower regions of various rivers from Yakutiya. The river routes now being exploited stretch more than 9000 kilometers—almost a quarter of the circumference of the globe.

River traffic has also speeded up. Comfortable double-decker ships of the Volga type run from Osetrovo to Yakutsk, a distance of about 2000 kilometers, in only 5 days.

In 1952 the Lena River Steamship Line acquired new powerful diesel ships of the latest Soviet type.

The Lena River route is now linked to the Siberian Sea artery by a direct railroad line (from Tayshet to Osetrovo docks).

The construction of overland roads has become a matter of nationwide interest in Yakutiya. About 2500 kilometers of permanent highways with winter road camps have been built. The construction and operation of highways have involved tremendous difficulties, such as coping with snowdrifts, ice floes, and ice-covered snow. Of the motor highways linking Yakutiya with the outside world, a particularly important one is the Amur-Yakutsk Highway which connects Aldan, and in winter Yakutsk, with the Ussuriysk railroad.

At the present time freight is brought into Yakutiya by four different routes: The Upper Lena wharves (Kachug, Zhigalovo), the Osetrovo wharf, the Amur-Yakutsk Highway, and the Northern Seaway.

Aviation routes connect Yakutsk with Irkutsk, Krasnoyarsk, Novosibirsk and Moscow. The local lines in operation are Yakutsk-Aldan, Yakutsk-Bulun-Tiksi, etc.

The centuries-old isolation of this region from the chief centers of the country is now a thing of the past. Extensive development has also
